Purchase and Expense Software Delivers Enterprise Security with Cloud Solution

“Windows Azure made the transition to the cloud easy. It managed the platform, redundancy, and security, allowing us to focus on development. We ported our solution and completed the Azure Active Directory Program with support from the Windows Azure team.”

WINDOWS AZURE ISV:

Ariett

WEB SITE: www.ariett.com

LOCATION: Pembroke, Mass., USA

INDUSTRY: Software Development

WINDOWS AZURE ISV PROFILE:

Ariett offers businesses purchase and expense management software on Windows Azure. Ariett eliminates paper and automates the purchase-to-pay cycle, providing real-time insight and control over company spend.

WINDOWS AZURE CASE STUDY

SITUATION:

Ariett’s purchase and expense management software required a cloud strategy that would support both customer choice and developer needs, with a single code base for both cloud and on-premises deployment. Another criterion was the ability of a cloud solution to offer Ariett customers synchronization with familiar Microsoft technologies, such as Active Directory (AD) and Microsoft Dynamics ERP.

SOLUTION:

Ariett chose Windows Azure to host its cost-effective, hybrid multitenant app, for which the web portion is shared, but the SQL database is isolated. With Windows Azure Active Directory’s single sign-on feature, users can easily and securely access Ariett Cloud and sync with their company’s AD. The solution also leverages Windows Azure’s reporting services.

BENEFITS:

- Ariett experienced exponential customer growth thanks to the following Windows Azure benefits:
- Software is deployed with little IT involvement and customers receive quick, seamless updates.
 - Customers gain choice of migrating between on-premises and cloud deployment options.
 - Windows Azure ensures security as well as ease of use with Windows Azure Active Directory.
 - Customers keep pace of modern business with Ariett’s mobile applications on Windows Azure.

What Microsoft Azure Means for You

Highest Standard for Cloud Application Security & Scalability

- Ariett Azure Active Directory Support
- Ariett Built on Microsoft SQL Server
- Ariett Automated Datacenter Redundancy & Replication
- Built in Scalability
- Ariett Document Service & Storage Azure Reporting Services

We Have An Edition For You

- From 25 Employees to 10,000 Employees
- Three Editions: Cloud Professional, Cloud Enterprise, On Premise
- One Solution for: PO Management, AP Invoice Automation, Document Management, Expense Reporting.
- Seamless Integration to Dynamics GP from the Cloud or On Premise

Ariett provides a complete eProcurement solution with integration to Accounts Payable for Payment Processing

Employee enters a web-based requisition and submits it into a workflow for approval.

Manager views the requisition committed to budget and approves or rejects it from anywhere with Ariett Touch's mobile interface.

After final approval, the requisition automatically generates a purchase order.

AP Invoice transaction details with audit trail populate your ERP system.

Vendor emails invoice to Ariett Box4Dox Cloud Service. Employee reviews the invoice, manages exceptions and submits it to a workflow for final approval.

Upon receipt of goods or services, Ariett matches receipt to purchase order, generating a pending AP Invoice transaction.

Ariett Invoice Process

 Gain insight and control with centralized visibility to invoice audit trails throughout the entire AP transaction process.

Invoice is emailed to Box4Dox.

No touch AP transaction is created, with invoice attached.

Data is integrated into your financial system.

The approver reviews electronic invoice and transaction details to approve, edit or reject the invoice.

Transaction is routed to an approval workflow, sending an email notification to the approver.

Accounting or Employee enters dollar amount and invoice number.
