Dynamic Alerts

A database monitoring program that monitors your data for changes or other specified conditions. When these conditions are met or a change is made, a notification or reminder can be sent via e-mail, text message fax or print.

Dynamic Reports

Includes Dynamic Alerts and allows your data to interact and kick off automated reporting with Crystal Reports, Microsoft SQL Reports, Web based reports and RTF text files.

Dynamic BPM

Also known as Dynamic Business Process Management. Includes Dynamic Alerts and Dynamic Reports. This utility allows you to trigger additional events based on changes in your data or other specified conditions. Write back to your database, launch .EXE files, post or get information from the web and even process VB Script and C#.

Interact with Industry products

Connect to any ODBC or OLE DB data source. This ability allows you to interact and monitor many of the building industries popular programs; Sage Timberline Office, Sage Timberline Enterprise, Sage Master Builder, Microsoft Project and many others….

Benefits

Helps you manage time, data and resources more efficiently by automating reports, monitoring your data and sending updates, reminders and notifications.
