

# Extender

Microsoft Dynamics GP

## Customization without Code

**Microsoft**  
**GOLD CERTIFIED**  
Partner

**Make Dynamics GP fit your business without writing a single line of code. Extender puts you in control by letting you capture the data you need, when and where you need it.**

**Extender ensures you can take control of your Dynamics GP system to make it work exactly the way you need. You do not have to fit your business into Dynamics GP – change Dynamics GP to fit your business—all without writing a single line of code.**

**Extender makes GP the most flexible ERP software on the market.**

Take Control: Make GP work for you

*Extender was the way we made GP fit perfectly into the world of commercial washing machines. We used Extender to build 23 new screens for Dynamics GP – all by ourselves and without a programmer. We then went the next step and had the eOne team help with making some of those screens do things with logic and integration points.*

**Extend GP's Data Capture:**  
Create new windows for GP that let you add business specific data to any Microsoft Dynamics GP transaction or master record in just minutes. Simply label the fields and choose from 17 different field types—all without writing a single line of code.

**Context Sensitive Data Capture:**  
Have your new windows become available only when you need them. Capture different types of data against different types of records, all based on your own rules.

**Create Custom Entities:**  
Create your own setup, master records, or transaction screens by building brand new independent data entry screens. Use the data collected to link to windows, combine with other forms, create data in GP via SmartConnect or use on reports. Build your own mini application with Extender.

**Report on your New Data:**  
Every piece of data you capture in your new screens can be easily included in your reporting. Add the data to SmartLists, Excel Reports, Report Writer, BI Reports. Extender creates SQL views for all your new screens to make reporting easy.

**Better than Dex:**  
Take Extender the next step by making your screens do things with Extender logic. Move data from one place to another, enable and disable fields, have context specific calculations and pull data from GP tables into these windows. Extender helps to keep the cost of upgrades low by eliminating the need to go back to your developer for new versions. Simply install the new Extender build and you are upgraded.

**Connect with the eOne Stack:**  
Use SmartConnect to turn the data you just captured into more Dynamics GP master or transaction data. Use SmartConnect to import data from anywhere into your new custom Extender screens. For easy reporting use SmartList Builder and Excel Report Builder to combine all your Extender fields with regular GP data.

# Extender

## You're in control

The options are all in your hands. Create windows, detail windows, forms, detail forms, notes windows, use multiple identifiers to get the screen just how you want it. Each new form can contain up to 30 fields plus 120 fields on extra buttons.

✓ Short String	✓ Labels	✓ Long String
✓ Numbers	✓ Currency	✓ Calculations
✓ Accounts	✓ Check boxes	✓ Dates
✓ Folders	✓ Linked Lookup	✓ Percentage
✓ Lists	✓ Lookups	✓ File

## Exact GP look and feel

Extender builds screens that look exactly like a regular GP screen. Each screen will contain highlighted required fields, browse buttons, drill down to other GP records, print screen, lookups, drop down lists, and links to Smartlist. Your users will believe these screens are a standard part of "your" GP system.

- \* Two way integrations between Microsoft CRM and Dynamics GP
- \* Two way integrations between Salesforce.com and Dynamics GP
- \* Excel templates to do your GP data entry right in Excel
- \* Manage CRM opportunities, addresses, contacts and activities in Excel

# Extender Enterprise

## The Big Brother Difference

Add logic to make your new screens clever. Extender logic allows you to take your design and add that little extra code behind it to complete a full solution. You can set specific field values, retrieve data from other GP screens or tables, perform complex calculations, update SQL tables, hide fields and disable fields.

Build custom searches using Extender's own search and enquiry screens. Color coded records make it easy to find what you are looking for.

## Trigger logic everywhere in GP

When you enter, exit, change, open, close, or print anything in GP you can trigger Extender logic to run. This puts all the power in your hands to truly make GP do all the heavy lifting you need it to do:

- \* Execute custom scripts
- \* Run SQL
- \* Run macros
- \* Open other Extender screens
- \* Open GP screens
- \* Enable and disable fields
- \* Run an application

“

*Extender has virtually unlimited capabilities. I haven't found anything I can't do with it.*
