

PanatrackerGP Inventory Management

Bar Code Data Capture for Microsoft Dynamics® GP

Searching for a Warehouse Management System (WMS)?

If you currently use Microsoft Dynamics® GP ERP system, you already HAVE an inventory management database. To maximize your investment, add bar code data capture and the convenience of mobile handheld computers.

PanatrackerGP leverages Dynamics GP and adds the ability to capture inventory transactions when and where they occur. The efficiency and accuracy added by barcode data-collection is the key benefit sought by organizations looking to invest in a warehouse management system. You can add this key benefit at a fraction of the cost of implementing an independent WMS system. Leverage your investment in **Microsoft Dynamics® GP with PanatrackerGP.**

Do you currently...

 Manually record transactions and then enter them into the computer later?

 Rely on staff that “just knows” where the inventory is located without any other formal control?

 “Manage” inventory on white boards, post-its or clipboards?

 Keep Excel spreadsheets or other alternate databases without any integration to your accounting system?

 Have staff that spends hours troubleshooting issues or reconciling inventory-related issues?

 Tolerate increased shipping costs due to inventory shortages or incorrect outgoing shipments?

 Lack inventory tracking accountability?

Effective inventory tracking is proven to save costs and increase sales. Bar code technology provides enormous benefits to your operation by adding fast and reliable data capture.

Inventory Management doesn't need to be complicated.

Invest in the tools that allow efficient inventory management in Microsoft Dynamics® GP. Learn more about PanatrackerGP Mobile Bar Code Data Capture solutions.

The PanatrackerGP Inventory Solution

PanatrackerGP provides immediate inventory validation through its direct integration with Microsoft Dynamics GP. As a cross between a simple data capture tool and a full independent Warehouse Management System, **PanatrackerGP takes advantage of inventory tracking capabilities that already exist within Dynamics GP.**

By using PanatrackerGP, inventory remains managed in Dynamics GP, keeping seamless integration with your accounting system. **Inventory transactions are created and updated in Dynamics GP** for posting. Transactional history is maintained within GP, the same as if entered manually.

PanatrackerGP adds real-time validation as the transaction is being captured. By providing a tool to capture transactions at the point and time they occur, **manual keying and duplicated entry is eliminated**, and bar code technology will add efficiency.

Better yet, **PanatrackerGP offers additional capabilities for your inventory tracking.** Our user-definable fields add the option to track additional details. Our robust *Transaction Manager* provides the ability to define users and profiles, manage configurations and control your mobile devices. **Every transaction initiated from the handhelds is logged in detail -- adding endless options to create reports or documents.** The PanatrackerGP solution together with Microsoft Dynamics® GP offer a robust inventory management solution.

PanatrackerGP Inventory Transaction Overview

We already have the inventory and asset database!

Benefits of PanatrackerGP

- ◆ Works in hosted environments!
- ◆ Eliminate paper-based tracking and duplicated transaction recording.
- ◆ Gain real-time validation when and where the transaction occurs.
- ◆ Increase accuracy with bar code data capture while leveraging your current investment in Microsoft Dynamics® GP.
- ◆ Access inventory information when and where needed.
- ◆ Record inventory changes quickly and efficiently.
- ◆ Free up valuable time so your staff can handle other important tasks.
- ◆ Increase operational efficiency and reduce overtime pay or temporary staffing requirements.

Receiving¹

Receive against purchase orders and optionally print bar code item labels with the Label Printing Module.

Inventory Adjustment Transactions ~ Add and Remove¹

Perform inventory adjustments by scanning the items. Use our configurable reason codes to exert additional control.

Transfer Transaction¹

For transfers between sites, this transaction offers optional item label printing and additional user-definable data capture fields. Use these fields to manage in-transit tracking.

Move Transaction¹

When using multi-bin level tracking in GP, this transaction is the tool to quickly move items from one bin to another within the same site. Set up priority bins within GP for the item to add additional validation options.

Stock Count¹

Using the Dynamics GP Stock Count Schedules, this transaction helps efficiently count inventory with immediate updating to the Stock Count Entry in GP.

Order Fulfillment Module

View and manage the order pick list from the handheld. Scan items to validate picking. Item pick list is dynamically sorted to display the items remaining to be picked at the top of the list. A shipping-box assignment option offers additional tracking that can be used with third party shipping applications.

Assembly Module

Create and label assembly items based on the Inventory BOM.

Project Accounting Transfer Module

Record usage of inventory items against the Dynamics GP Project Accounting module by capturing and creating the transfer to a project.

Vendor Returns Module

Create an adjustment for inventory and a corresponding payable return transaction to return items to a vendor. Clearing accounts assist in management of the inventory offset transactions created.

Container Module

Using the multi-bin features within GP, this module adds additional bin tracking to support identified "moveable" or "container" bin assignment to physical bin locations. Move, store and transfer inventory as a "group".
