Business Solutions for Maximum Performance

Matrix Inventory Management

Matrix Inventory works for a wide variety of product families and attributes such as size/color/style   pattern/color/width, etc.

EASY SETUP

Supports any product attribute scenario including: **size, color, style.** Create and maintain inventory **product families** easily and consistency with the **matrix** inventory creation window..

EASY TO USE

Entering matrix quantities in sales order and purchase order module is easy using the **Matrix** entry form order module. Entering many line items becomes **fast, quick and simple.**
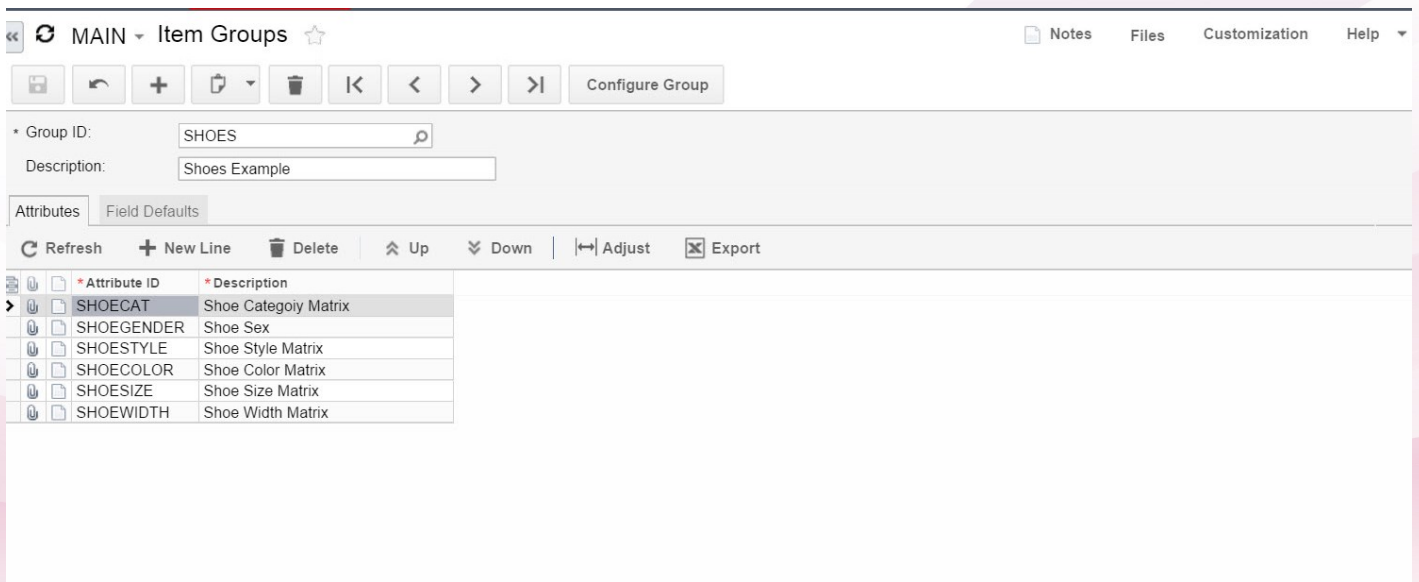

Inventory Matrix Management

Realize significant time savings by automating the inventory entry process and leverage your investment in Acumatica with MaxQ's Matrix Inventory Management module. Regardless of the type of product or industry this module supports the flexibility of handling an unlimited number of user defined characteristics and works for a wide variety of product attribute types such as size/color/style and waist/length for apparel, size/width for shoes, or pattern/color for flooring.

The greater number of attributes, the more challenging and time consuming it is to create and maintain these items using manual entry. The Matrix Inventory module facilitates the definition, creation, and maintenance of matrix groups and their associated items. It provides mass creation and update capabilities with all or selected variations of product attributes. Items can be created with user defined, or system generated inventory IDs, and intelligent item descriptions constructed from attribute definitions and values.

DEFINE PRODUCT FAMILIES

Easy to setup product families, supports any number of product attributes. Inventory items can be created with user defined, or system generated inventory IDs, and intelligent item descriptions constantly constructed from attribute definitions and values.

QUICK ORDER ENTRY

Enter quantities in Sales Order and Purchase Order Modules using the fast inventory matrix form.

FEATURES & FUNCTIONALITY

- Supports an unlimited number of item groups and attributes (up to 50)

- Inserts attribute elements as needed for additional product variation support
