

## **Omni Price**

*Manage any pricing structure easily*

### **Pricing made simple**

Omni Price is a flexible and powerful customer pricing system designed to enhance the Invoicing and Sales Order Processing modules of Microsoft Dynamics® GP. With its comprehensive pricing matrix and filter based selection system, Omni Price simply handles almost every pricing situation you are likely to think of, and some you hadn't.

### **Unlimited customer and item configurations**

Apply pricing contracts to a specific customer or to groups of customers based on any combination of up to 17 criteria using the customer filter. Apply a contract to groups of items using the item filter and its 17 available criteria, or enter individual items directly into the pricing matrix.

### **Date and data driven flexibility**

Use the date filter to apply pricing for up to 5 specific intervals and even limit to certain days of the week. Limit contracts to only be applied when the transaction details match the 7 optional criteria of additional filters.

### **Variable price calculations**

Use the Pricing Matrix to define how the special price should be calculated. Select from 13 available pricing modes, including:

- fixed price or price adjustment
- percentage of standard or current cost
- percentage of list or calculated price
- percentage markup of standard or current cost
- percentage margin of standard or current cost

### **Additional features**

- Prioritize contracts to automatically select between multiple valid contracts
- Use Markdowns with an optional specified account to track the actual value of the contract in your General Ledger
- Full Multi-Currency functionality
- Quantity Breaks are automatically calculated and can have different pricing modes for each
- Comprehensive Customer Price List reporting
- Simple Price Check window to confirm pricing
- Optional Transaction Logging of all special pricing applied

*"It is refreshing to get answers as directly to the point as Rockton does. Keep up the good work."*
