Providing products and services to enhance Microsoft Dynamics® GP Payroll and Human Resources

Paycheck "What If" Calculator

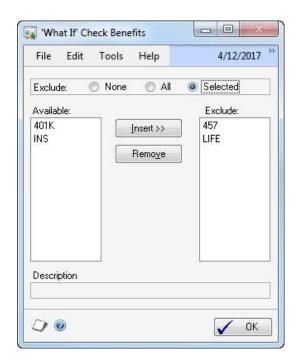

Enable payroll users to process hypothetical payroll calculations to determine what an employee's new net paycheck would be if a change is made to his/her pay, tax withholding allowances, deductions, or benefits.

Do you ever need to gross up the pay for an employee using their current tax settings so the net check is a pre-determined amount?

Eliminate the need to change employee settings (and subsequent hassles if information is not returned to the correct settings) as well as the need to process a mock payroll by using Payroll "What If" Calculator. Increase employee satisfaction by printing easy-to-read reports that help employees and their families make important decisions regarding compensation.

Payroll "What If" Calculator can also be used to calculate the gross up amount of a bonus, gift, or other employee check so that the net check is a pre-determined amount.
