

RAMP

FEATURES AND BENEFITS

Comprehensive reporting capabilities

- shortened reporting cycles help increase speed and quality of decision making.
- interactive ad hoc queries allow managers to react faster to change and fine tune their decisions.
- automated reporting reduces manual effort required to generate company performance indicators.

Integrated reporting across multiple sources and Stores

- key performance indicators provide additional insight into company performance.
- extending RA to see other data, such as from an ERP system, provides a unified view of the business.
- greater visibility on company performance leading to better forecasting and budgeting.

Reliable Inventory Management

- minimize excess inventory stock and maximize inventory availability.
- save cash by transferring inventory from slow moving stores to faster moving stores.

Open to Buy Module

- improved control of buyer's spending and inventory carried, minimal effort required to gather information from buyers.
- improved visibility reduces effort in planning inventory requirements.
- allows for greater control over inventory.

System Generated suggested store transfers and purchase orders

- system's flexibility allows buyers /merchandise planners to modify, delete or add to automatically generated purchase orders and store transfers.

"The reporting features in Retail Analytics (RA) are easy to use due to my familiarity with MS Excel. Merchandise Planning (MP) gives us the flexibility we need to control our inventory which has helped us increase our bottom line. With that being said, RAMP has paid for itself by saving us time on reports and helping keep the right items in stock and increasing our overall stock turn."

*John Brooks
Chief Operating Officer
