

Microsoft Dynamics GP

Makes SmartList a whole lot better

SmartView is just like SmartList – only a whole lot better:

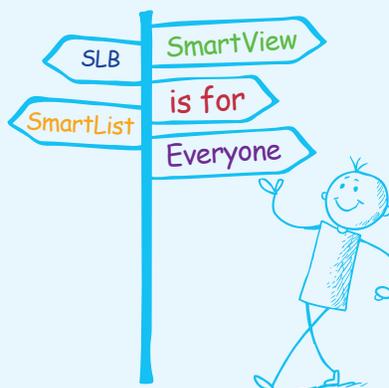

- ✓ **Amazingly fast access to your business data**
- ✓ **On screen grouping and subtotalling**
- ✓ **Unlimited flexibility in setting filters**
- ✓ **Cut and paste records to Excel or Outlook**

SmartView is available both inside and outside of Microsoft Dynamics GP, which means you can share SmartView lists with everyone who needs access to GP data, without buying new GP licenses.

I can say, WOW, I am very impressed with how fast the data loads from SmartView to Excel, I really think that is the #1 feature of your product. SmartView returned 200,000 records in 6 seconds and then exported it to Excel in 9 seconds. I could spend 30 minutes talking about the good things in SmartView.

Faster Lists

SmartView is so fast you will wonder why you have spent so much time waiting for lists to refresh. SmartView will return the data you need very quickly with 1000 records in less than a second and 50,000 records in less than 4 seconds. Add columns of data, re-order columns and set filters without waiting for the lists to refresh again and again.

Better Filtering

SmartView will return just the data you need to see by providing an unlimited number of filter criteria. There are 18 filter functions to choose from including 'is any of', 'begins with', 'contains' and 'is blank'.

Groups and Totals

SmartView's drag and drop grouping makes looking at large volumes of data easy. Shrink and expand your groups at will and see all the total and subtotal information for the entire list of individual groups on screen. Configure your list with multiple groupings to suit the data you are looking at.

Stand Alone

SmartView can be accessed outside of Dynamics GP. Share SmartLists across your entire organization, making everyone equally informed and self sufficient. When people say that 'Information is King' they were talking about SmartView.

Fastest Path to Excel

Cut and paste select records right from your SmartView list into Excel. There is no faster way to move your data to Excel than to cut and paste. You can also get creative by cutting and pasting records into Outlook or Word or any application of your choice.

Full Screen

You decide what components you want on the screen to maximize space available for your data.

SmartView makes everyone Smarter

The gift of knowing

A smart organization is one where everyone can find out exactly what they need to know, when they need it.

Every piece of data you capture in Dynamics GP is available via SmartView which means you can always give the right people the right information at the right time.

SmartView provides access to live business data to everyone in the organization regardless of whether they have access to Microsoft Dynamics GP. This eliminates the guesswork, allowing your entire team to make informed decisions on the spot. Use security to keep things simple for users and lock down confidential data.

Really fast data to go

SmartView is the fastest way to find the data you need. If you need to return hundreds of thousands of records, or a single invoice number – SmartView wins the race. With its own Cut and Paste function, SmartView will have you armed with data and out the door in a hurry.

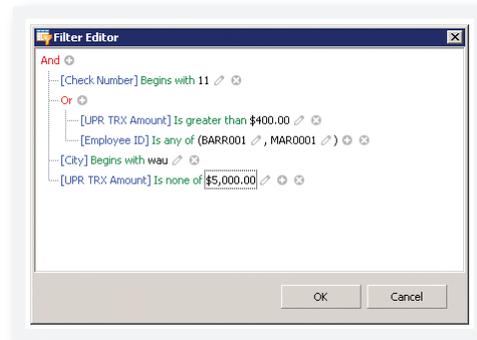

- ✓ Pull data from any GP Module
- ✓ Pull data from outside of GP
- ✓ Print your formatted lists
- ✓ Export to PDF
- ✓ Export to Excel
- ✓ Cut and paste selected records

Filter, find and subtotal

The unlimited number of filter criteria means you can narrow down your query to the exact data you need. There are simple drop down and select filters or complex filtering using the filter editor.

The find function will ensure that even if you are not exactly sure what you are looking for, you find it. Ask SmartView to search just a particular column or to search across the entire data set. SmartView will highlight all the records that match your find criteria.

Grouping the data means that you can start analyzing summary level data and then drill down to the records you need to work with. Auto subtotalling allows you to see totals at a glance and identify trends at a high level.

See all GP and SLB Lists

All your existing 'out of the box' GP SmartLists, as well as all the SmartList Builder Lists you have built, are available within SmartView.

The switch is so easy, users will simply think that SmartList got better overnight.
