

THE VALIDATOR

THE VALIDATOR SERIES is the latest toolset from Reporting-Central that makes MICROSOFT DYNAMICS® GP a BETTER BUSINESS SOLUTION.

The Validator does just what its name says, it “validates” critical system and data components of Microsoft Dynamics® GP. SYSTEM VALIDATION includes GP Set-Ups and GP Master Data Files, and DATA VALIDATION encompasses Data Fields relevant to government compliance facilitation and accurate reporting.

The Validator performs a 100 point inspection of your Dynamics® GP System - it’s all about prevention. You go to your trusted mechanic to have a specific problem fixed, but a good mechanic always inspects your vehicle and looks for other existing or potential problems. Running The Validator regularly lets you stay on top of your Dynamics® GP solution.

Mark is the originator of the famous “50 tips in 50 minutes”, host of dynamicaccounting.net and author of “The Cookbook for Dynamics GP”

Stop treating the symptoms because you cannot find the problems. The Validator finds system set-up and data integrity problems quickly, enabling you to reallocate your time from looking for a problem to fixing the root cause. The end result for customers is higher data integrity, reduced risk and system optimization.

Reporting-Central is focused on making Microsoft Dynamics® GP a better business solution. The Validator Series is the perfect companion to our award winning product, The Closer.

Our tools are a great way to help you save time, money, resources and gain peace of mind; eliminating manual validation and reconciliation processes and reducing your overall business risk. From filing 1099’s to ultimate data integrity to achieving a “Single Version of The Truth”, with The Validator Series and The Closer, everyone wins: Dynamics® GP customers, Dynamics® GP partners and everyone you do business with, even the government...

THERE ARE CURRENTLY TWO TOOLS THAT MAKE UP THE VALIDATOR SERIES:

The ultimate tool for “validating” your System Set-up and Master Data Files in Dynamics® GP. In fifteen seconds or less, The ValidatorGP inspects over 100 key points in Dynamics® GP, provides customers with a detailed view of potential issues and offers guidance for resolution.

BENEFITS OF THE VALIDATOR GP

- Improve sales tax compliance by finding missing tax schedules
- Mitigate security risks such as who can print checks or who are your power users
- Become aware of potentially risky system set-ups
- Ensure that you are on the latest Service Pack
- Fix stuck and orphaned transactions that you can't even see
- Unlock stalled processes and users
- Correct improper posting settings such as “Why are you still posting by batch?!”
- Identify missing sales data such as salespersons and territories that affect reporting
- Export the findings to Excel for easy submission to your Partner for analysis and assistance

The only solution built specifically for Dynamics® GP that automates the process of validating TIN's for expedited and accurate 1099 processing. The Validator1099 compares the relevant GP vendor data with the IRS TIN Match Service. So whether your vendor provided an erroneous TIN, a false name, a bad address or has moved, changed names or started-up under a new TIN - The Validator1099 will catch the issue early and minimize, if not eliminate, your risk in reporting bad information to the government.

BENEFITS OF THE VALIDATOR 1099

- Automated TIN Matching
- Eliminate errors in the 1099 reporting process
- No more waiting months to know if the TIN's you filed against were accurate
- No more time spent manually tracking down inaccurate or erroneous details provided by vendors
- No more government fines for incorrect 1099 data
- Confidence that you are filing your 1099's with accurate data
